

CONSTRUCTION

ENGINEERING

SMI has been involved with the engineering of over 400 ski area master plans and snowmaking expansions. These projects ranged from simple single trail extensions to over 250 drawing sheets for complicated total system expansions. The engineering can start with exploring water and power alternatives and provide ideas on best organizing and distributing these resources. Analyzing hydrant by hydrant the best snowmaking technologies to utilize for every trail can be another important aspect of snowmaking planning and engineering. Other areas of expertise include reservoirs, pumping and air plant stations, piping and power distribution systems, water cooling, snowgun layouts and all the details that support these ideas.

Our team of construction professionals has helped install over 150 snowmaking systems over the past 20 years. Simple projects that last two or three weeks to full blown multi-million dollar turnkey projects that take up to a year to complete, have all been successfully accomplished. SMI typically can install snowmaking for prices similar to or less than your resort can, so why not have SMI's team of experts do it right for you? We take time to pin down the details so there are no surprises and guarantee a fixed fee on time project.
