The SMI® automation software and control package has been developed to provide a menu driven flexible package for your resort. SmartSnow™ is built on the latest Microsoft technologies and can be connected via wireless internet, Ethernet, fiber optic, radio modem or traditional hard wire.

SMI offers many forms of automation for your resort to consider including remote control, semiautomatic and full automatic modes of operation for individual standalone machines or machines connected to a complete network.

SMI's full range of fan and stick products can be connected to and controlled by the SmartSnow™ software. SMI's Wizzard, Polecat and Viking families of products can all be started, stopped and adjusted automatically.

SMI's hydrant actuator allows complete automatic water hydrant control to be retrofitted onto your existing water hydrants. SMI offers full hydrant throttling capabilities across the full range of water pressures up to 1000 psi. Setup and operations are simple, transportable and menu driven. Your water and air supplies can be automated in other ways such as trail flooding and on/off valves too.

SMI SMARTSNOW™

give 'em snow!

**FLEXIBLE
MODULAR
MENU-DRIVEN**

“ Two years ago we ran our automated machines in manual for half the season then switched to auto. Production increased by a whopping 37 percent! We repeated the test this season with a 34 percent increase. Automation? Sort of a “no-brainer” isn’t it. ”

—Robert Yaste,
Wisp at Deep Creek
Mountain Resort

- How many years have you just barely opened?*
- How much terrain must you open for Christmas?*
- What type of snow quality is acceptable?*
- Are your grooming costs up?*
- Are you maximizing your investment in snowmaking?*
- Is your resort operating at peak performance?*

Your answers to these questions can mean all the difference to your resort's success. SMI® provides manual and automatic snowmaking solutions to meet your needs. Our SmartSnow™ automation technology offers multiple-dimension, custom solutions with an emphasis on trail-by-trail, hydrant-by-hydrant snowmaking design. Our automation products and technology are flexible, modular and menu-driven. We use top of the line weather stations, programmable logic controllers with touch screen displays and simple but effective valving controls.

The ability to open significant portions of your mountain early and quickly, maintain the trails with good snow and produce it at an affordable cost are the keys to success. Isn't that what you and your customers really want?
