

SMI

Automatic Machines

The SMI® SmartSnow™ automation allows maximum flexibility for your resort. SMI offers many forms of automation for your resort to consider including remote control, semi-automatic and full automatic modes of operation for individual stand-alone machines or machines connected to a complete network.

Remote control allows you to tell the machine what to do, like your garage door opener. Semi-automatic has a manual start and stop, but has automatic operation changing flows as the temperature changes. Full automatic features automatic start, operation and stop. Automatic machines are available as standalone or with a total system.

SMI equipment is proven and can be used on either portable or tower machines. Communication to the equipment can be via hard wire, fiber optic, radio, cell phone or Ethernet.

Contact SMI today for details.

Automatic Machines
